

# Intro to DOM

Document Object Model

# Unit Goals

what we'll cover

- what DOM is
- selecting
- properties and methods
- events

# DOM

**DOCUMENT**

**OBJECT**

**MODEL**

# DOM

## WHAT IS IT?

- The DOM is a JavaScript representation of a webpage.
- It's your JS "window" into the contents of a webpage.
- It's just a bunch of objects that you can interact with via JS.

# DOM

HTML + CSS go in

JS Objects  
come out

# DOM

HTML + CSS go in

```
<body>
  <h1>Hello!</h1>
  <ul>
    <li>Water Plants</li>
    <li>Get Some Sleep</li>
  </ul>
</body>
```

I'm an Object

JS Objects  
come out

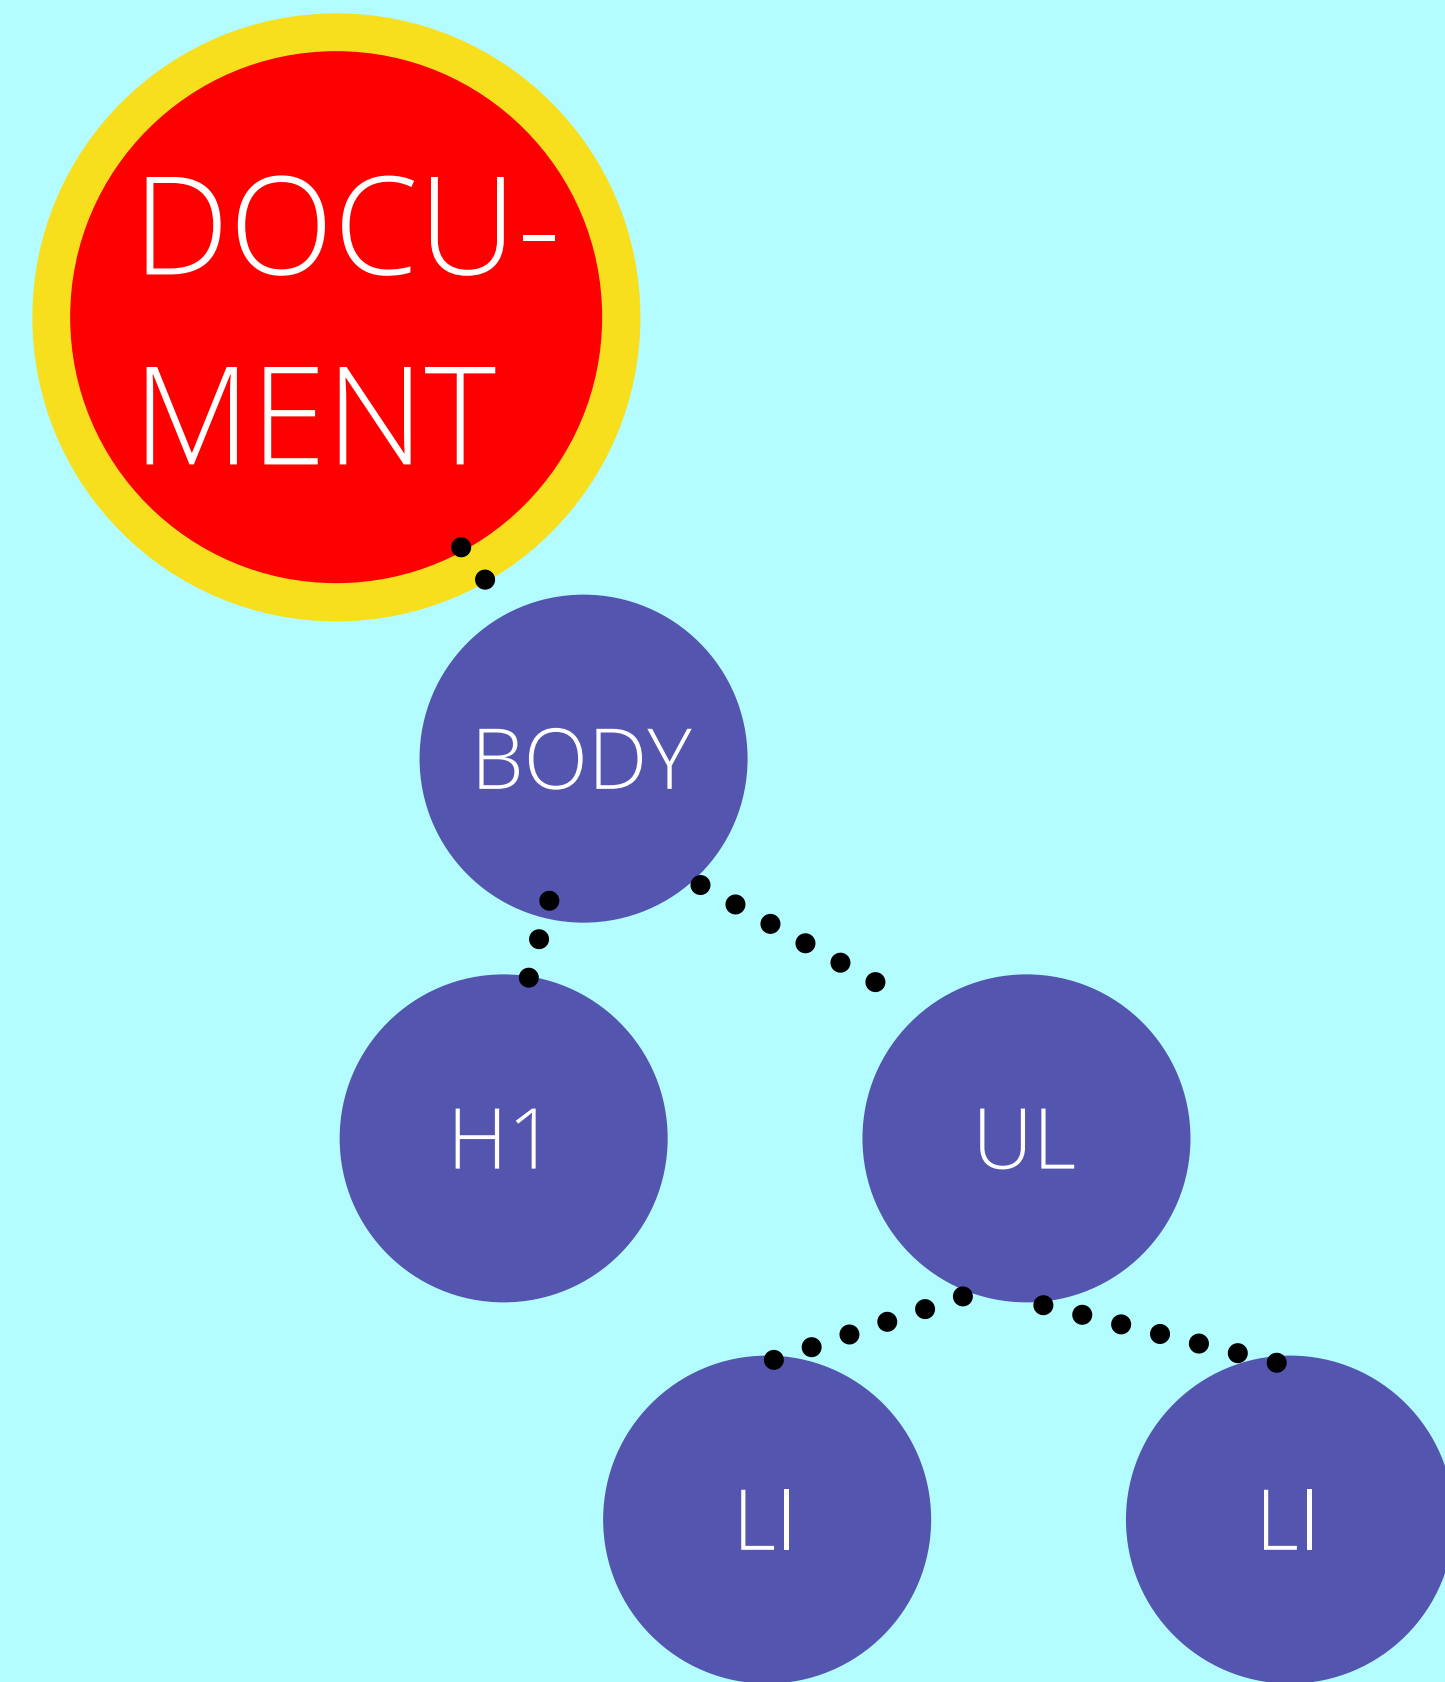

Me too!

# DOM: DOCUMENT

The document object is our entry point into the world of the DOM. It contains representations of all the content on a page, plus tons of useful methods and properties

# SELECTING

1) SELECT

2) MANIPULATE

# SELECTING

1) SELECT

2) MANIPULATE

# SELECTING

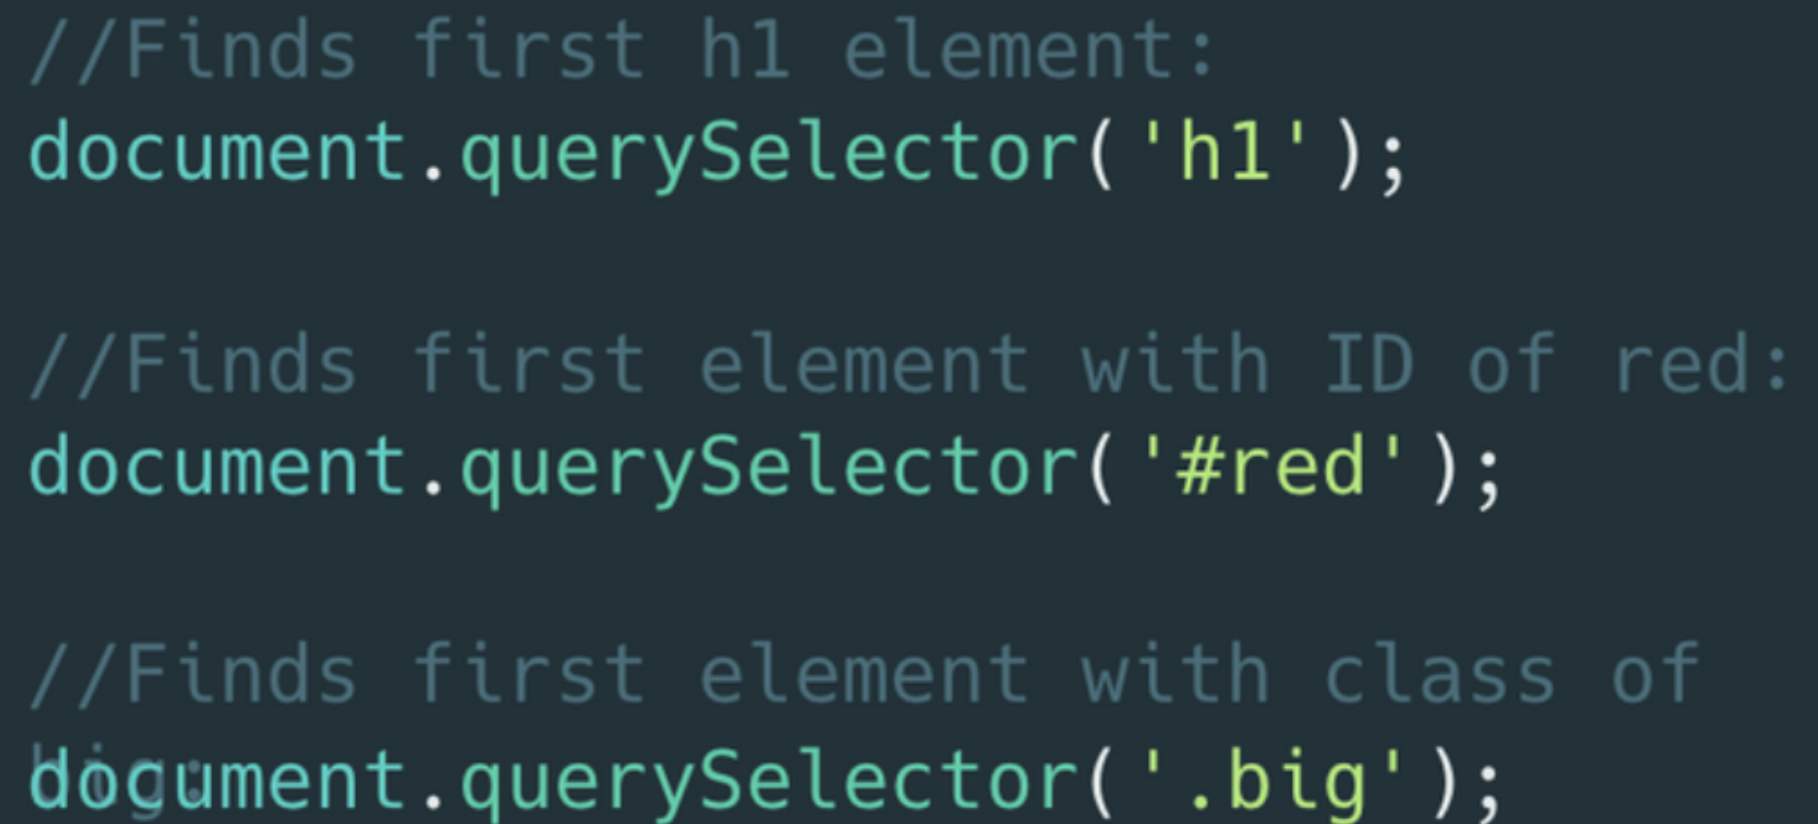

- `getElementById`
- `getElementsByTagName`
- `getElementsByClassName`

# SELECTING

- **querySelector**

A newer, all-in-one method to select a single element.

```
//Finds first h1 element:  
document.querySelector('h1');  
  
//Finds first element with ID of red:  
document.querySelector('#red');  
  
//Finds first element with class of  
document.querySelector('.big');
```

# SELECTING

- **querySelectorAll**

Same idea , but  
returns a **collection**  
of matching elements.

# SELECTING

1) SELECT

2) MANIPULATE

# SELECTING

1) SELECT

2) MANIPULATE

# PROPERTIES & METHODS

(THE IMPORTANT ONES)

- classList
- getAttribute()
- setAttribute()
- appendChild()
- append()
- prepend()
- removeChild()
- remove()
- createElement
- innerText
- textContent
- innerHTML
- value
- parentElement
- children
- nextSibling
- previousSibling
- style

# A SMALL TASTE

(THE IMPORTANT ONES)

- clicks
- drags
- drops
- hovers
- scrolls
- form submission
- key presses
- focus/blur
- mouse wheel
- double click
- copying
- pasting
- audio start
- screen resize
- printing

# addEventListener

Specify the event type and a callback to run

```
const button = document.querySelector('h1');  
  
button.addEventListener('click', () => {  
  alert("You clicked me!!")  
})
```
